Education

Donor requirements

Storage and Handling

Documentation

Benefits

- Families
- Providers
- Human milk for human babies

Prenatally Expressed Breastmilk

SGMC does not support the use of unlabeled EBM

CDC recognized EBM as a food source NOT bodily fluid

Family lounge refrigerator

Private cooler and labeled

Family responsibility

Patients in all parts of the hospital expressing milk will keep EBM on the unit

Covid

EBM left behind

Cooler and ice / Unit Refrigerator

Financial Return on Investment for DBM Use

- Review of Admissions to NICU
 - Examine rate of admissions to NICU from Mother Baby for hypoglycemia
 - Use ICD 10 code for neonatal hypoglycemia (P70.4) to determine incidence of admission to NICU specifically and not in combination with another dx
 - Determine percentage of total admissions for at least 3 years prior to establish trend of hypoglycemia admissions
 - The average LOS for this diagnosis and number of admissions can help determine the average cost for a hypoglycemic admission to NICU
 - The cost of a NICU admission is then compared to the cost of purchasing and using donor breastmilk to prevent the admission
 - The money saved on unnecessary NICU admissions is greater than the cost of purchasing the DBM
